Github: <https://github.com/ignoch>

The lasts of the Webmaster era with knowledge of backend, frontend, and DevOps capabilities. My principal language at this moment is Ruby, but I know various scripting languages. I like to write clean, tested, and concise code, and try to do that on my daily basis

Education

Universidad de Guadalajara - Licenciatura en Informatica (Computer Science Bachelor)

Major: Software Engineer

Minor: Science and engineering

Skills

Hard Skills

Ruby, Rails, Javascript, PostgreSQL, Redis, RabbitMQ, REST, SCIM, SAML, Git, Docker, Bash, Unix

Soft Skills

Integrity, Effective communication, Teamwork, Problem solving and Willingness to learn

Experience

Software Engineer *Symplr - Houston Texas, Remote - Mar 2023 - Jan 2024*

- I was in charge of modifying/optimizing the codebase on Ruby, upgrading and maintaining all the services related to the application. I was helping the team to understand and change the application.

Software Engineer *Synack - San Francisco CA, Remote - Mar 2021 - Mar 2023*

- I Write and maintain REST APIs using Rails for different services, communicating with broad non-rails services and keeping it clean and straightforward.
- I was in charge of writing a new feature called Credits Ledger. I was in the design, architecture, database design, and writing the implementation along with doing support to other developers as a tech lead.
- I wrote a Sendgrid python app to maintain the email templates using git and CI to avoid doing it manually.
- I was helping other developers to ramp up coding in the application and conduct major refactorings in some services, increasing the code coverage and tuning performance in complex SQL queries.

Software Engineer *Michelada.io - Guadalajara, MX - Oct 2020 - Mar 2021*

- Mainly working with several clients to support different Ruby/Rails architectural technologies and improving their code coverage, response times, cache management and queries performance issues along the way.

Software Engineer *OneLogin, Inc - Guadalajara, MX - Aug 2015 - Apr 2020*

- Integrating existing REST services from other IPs and several external services
- Supporting our SCIM structure to allow companies to be added into our app supporting catalog.
- Dockerizing some internal services.
- Applying in-house solutions to a better performance in authorizations and authentications
- Creating new Services from scratch, understanding the needs for our customers.
- Helping others to be successful in our team.

Ruby developer *SerpicoDev - Phoenix, AR - Mar 2014 - Aug 2015*

- I was in charge of create new features and resolve bugs along with the client SocialWhirled, in order to expand a legacy app created on Rails 3. I had experience implementing some services on the servers, and consume APIs for the platform when it was needed

Rails developer *ITexico - Gudalajara, MX - Dec 2013 - Mar 2014*

- I was in charge to support, resolve bugs and added new features to a inventory service created with Rails 2, javascript, and some style markup with HTML and CSS using haml and sass

Rails developer *Agilekoding - Guadalajara - Nov 2010 - Oct 2013*

- Supporting and creating sites using Rails
- Using agile methodologies for project managment
- Using Backbone.js, Underscore.js and Coffescript for frontend applications
- Doing TDD with Rspec, spork and FactoryGirl
